

Performance breaking

Juin TECH, established in 2012, produces a range of disc brakes for flat bar and drop bar bikes, combining innovation with performance.

The patented design of the R1 hybrid hydraulic road brake provides performance controlled braking via cable pull actuation at 143grams per calliper. Keeping pace with industry standards, the F1 is a flat mount hybrid hydraulic disc brake with the same performance and control of the R1.

Ebikes are catered for with the M1, combining the looks and style of the R1 with increased performance to handle the additional weight of eBikes.

The DB1 hydraulic disc brakes for MTB/flat bar bikes provides progressive performance braking in an array of anodised colours to match any custom build.

All of the products are designed and developed by Juin TECH and 100 per cent made in Taiwan. UK, EU and rest of World (Excluding Asia) distribution by Edge Sports UK LLP.

Multi-directional blade

The unique 'Blade' rear safety light has been created to give cyclists more presence on the road, a concept derived from the designer personally seeing several cyclists nearly being knocked off from behind. The unique stylish multi-directional design gives the cyclist more protection, making the rear of the bike appear wider, utilising flashing LED's to encourage drivers to take more care and give more room when passing. Get active with Eco Voltz

The Active is the latest edition to the Eco Voltz range, designed using many of same high specification features and style as its best selling Urban eBike.

The aim was to design and produce a step-through eBike that had all of the appeal of the ever-popular Urban model, but at a price that would make it more affordable. Eco Voltz has achieved both and believe that the finished product speaks for its self.

Available to buy direct from Eco Voltz for £849.00 (inc. VAT) and in a choice of three colours – classic graphite, metallic blue or cherry red.

New Pirelli P Zero Velo range

Over a century of know-how in the racing world is finally available to those who ride to race themselves. With P Zero Velo, cycling performance now meets the reliability, the road handling and the grip of Pirelli. Discover the new standard of cycling tyre excellence, available in three different clincher tyre models:

P ZERO VELO – The P Zero Velo sets a new standard in bicycle clincher performance. At its core, the patented Pirelli SmartNET Silica: enjoy superior grip in both dry and wet conditions, as well as unparalleled puncture resistance and mileage.

P ZERO VELO TT – Designed for breath-taking speeds, while reducing both rolling resistance and aero drag, this is the fastest and most high performance tyre in the P Zero Velo family.

P ZERO VELO 4S – Harsh weather? Cold temperatures? The 4S is the way to go. With increased wet grip and puncture protection, this outstanding clincher will deliver an unbeatable performing ride. Its unique tread design is developed to shed water from your path giving maximum confidence in every weather condition.

Race-tested drop tech

ULTIMATE is showcasing the new ground-breaking dropper post, the Helix, with its unique pattern pending design making it light, strong but most importantly reliable, along with the new Vyce35 and 800 wide, 35mm Boom Bar that has been pushed to its limits in development by Scott Beaumont racing around the world in the Pro 4X tour. Stealth finished in premium UD carbon to pimp any bike but light enough to race and strong enough to shred any kind of riding, with the perfect combination of up sweeps to give you the balance and total control to nail every berm and jump.

20 / 20 vision

The majority of foldable electric bike owners never fold away their bikes when not in use, but there is still the need for an electric bike that takes up less space when at home, especially for many city-dwelling commuters. Moreover, the main purpose of a bike is to be ridden and unfortunately, the ride feel of a bike gets compromised quickly by a folding mechanism.

Momentum Electric's answer to this conundrum is 2wenty. It is a compact and nimble bike that sports the same AUTORQ system as its bigger siblings, Model T and Upstart. It compacts easily and quickly with a quick turn and retraction of the handlebar and a fold of the pedals. 2wenty takes up little more space than a foldable electric bike but with a quicker fold and a better ride feel. 2wenty is just as at home in the city as it is in the outdoors in a camper van or on a boat. Come give 2wenty a test ride
