

Sharpen your edge

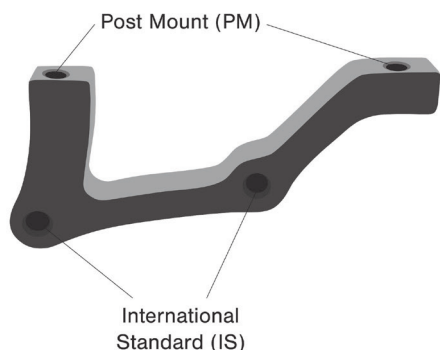

Pushing boundaries in racing and mountain biking

Lightweight Finned Brake Pads

- Faster heat dissipation over standard pads reducing the risk of brake fade
- No risk of brake boil on long descents
- Reduced pad and rotor wear over standard pads

Manufactured from Aluminium in a one piece design, this helps transfer heat build-up directly from the braking surface to the backing plate into the fins, maximizing heat dissipation.

Disc Brake Adaptors

- Aluminium
- Compatible with all brands
- From 140mm to 203mm to most combinations

International Standard to Post mount, we've got you covered

Since 1902 Fibrax has been making cycle components in the UK, specialising in braking and shifting components and more recently expanding into tools and cleaners. Join us at F45 for information on improving your braking or shifting experience, or to buy current and new products.

Lightweight Compressionless Brake & Gear Casing

- 60 per cent lighter than the market leader!
- Aluminium and Kevlar Construction
- Compressionless inner core

Manufactured with an aluminium core rather than steel, weight is kept down. Combined with improved flexibility, the Kevlar overwrap and compressionless linear core give the system a more digital feel with significantly less drag.

CNC Metal Ferrules

- CNC Machined from Aluminium
- Laser etched and Anodised

Using CNC machined ferrules keeps the casing square in the ferrule and in the frame, decreasing friction and cable deformation, giving a lighter, crisper lever actuation.
